1. Gross Combined Mass (GCM) is the total permissible combined weight of the vehicle including occupants, fuel and cargo and trailer vehicle being towed if any.

2. Gross Vehicle Mass (GVM) is the total permissible weight of the vehicle including occupants, fuel and cargo.

3. Kerb weights shown are for standard variants i.e. without weight of additional options. Kerb weight is the unladen weight of the vehicle including all fluids and a full tank of fuel. Additional weight of optional features and other accessories must be taken into account when calculating kerb weight.

4. Maximum payload weight is calculated as the difference between GVM and kerb weight. The weight of any vehicle occupants, options, accessories, modifications, cargo and tow ball download must be included when calculating payload weight. Payload should be distributed across both the front and rear axles and not exceed the GVM or the axle limits.

5. Towing capacity is subject to regulatory requirements, towbar and vehicle design, and towing equipment limitations. Ask your Dealer for Mercedes-Benz Genuine Towbar capacity and availability details.
